#### DATASTAX

# Unleashing the power of GenAl

Preventing Hallucinations, Securing Al and Controlling Costs

### Meet Michel and Dieter

Michel de Ru **Solution Engineer** 

in

Dieter Flick Solution Engineer

#### Abstract

Join Dieter and Michel in this session as they demonstrate how leveraging Astra DB's vector store and Langflow can significantly expedite the development of applications powered by LLMs. This session will provide a detailed look into how these technologies streamline the creation and deployment of LLM-driven solutions, significantly speeding up development processes.

The session will start with an introduction to the vector capabilities of Astra DB, which are essential for managing the high-dimensional data demands of generative AI applications. We will then focus on how Langflow, a pioneering low-code platform, accelerates the development lifecycle of LLM-powered applications. By facilitating rapid prototyping and iteration, Langflow enables developers to reduce development time dramatically.

## Agenda

- Setting the Context
- Astra DB and its Vector Capabilities
- Vectorize the Easy Path
- Coding vs No-Coding
- Takeaways

# Setting the Context

"Al can be dangerous if it doesn't know which data is correct"

A concern among developers, users and Michel's neighbour

### Just a Large Language Model

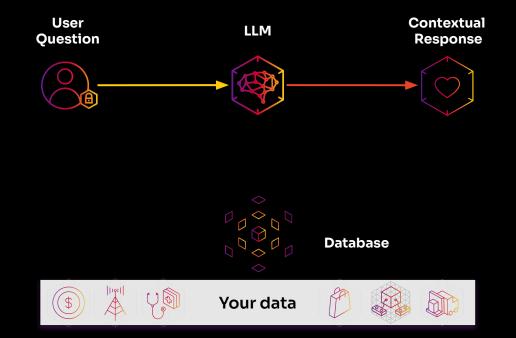

## Tapping into your data

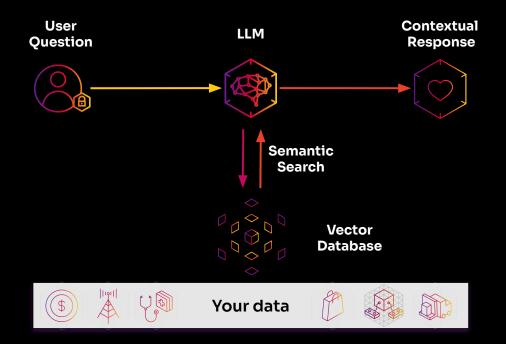

DATASTA) ( ©2024 DataStax – All rights reserved.

#### We need a database

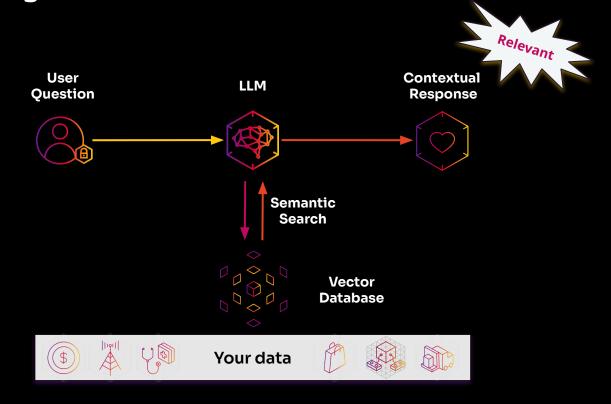

DATASTA) ( ©2024 DataStax – All rights reserved.

#### With Semantic Search

DATASTA) ( ©2024 DataStax – All rights reserved.

### Retrieval Augmented Generation (RAG)

# Demo: Without vs. with RAG

# Takeaway no. 1

# Leverage your competitive advantage

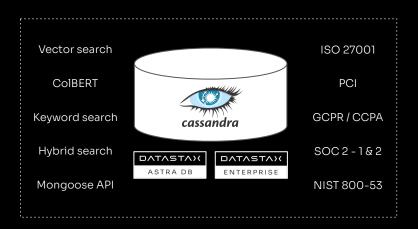

Your data and content are your crown jewels. Keep them close so you're in full control of innovation and application.

Prevent hallucinations, securing AI, controlling cost

# Astra DB and its Vector Capabilities

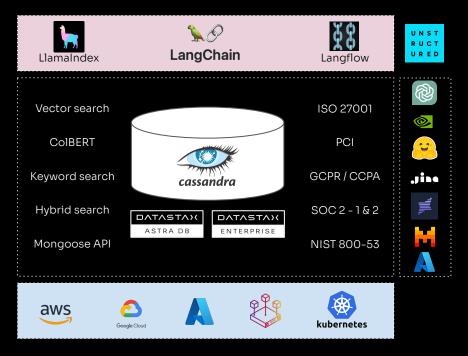

Up to **20% more relevant AI Search** than Pinecone **9x more throughput**Up to **74x faster response times**Astra DB delivers vector data updates with **ZERO delay** 

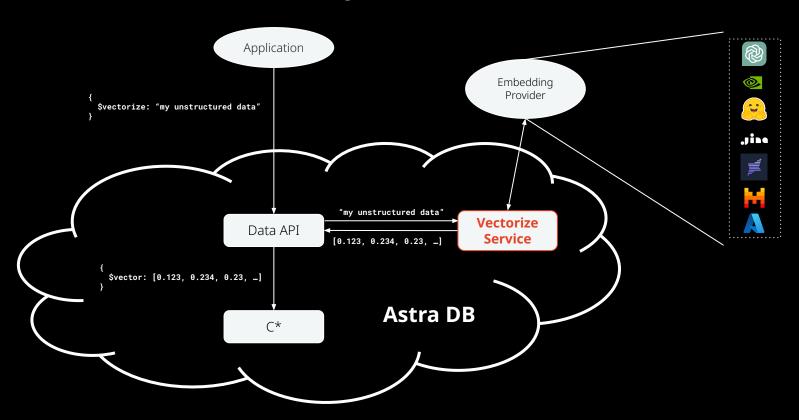

# Introducing RAGStack

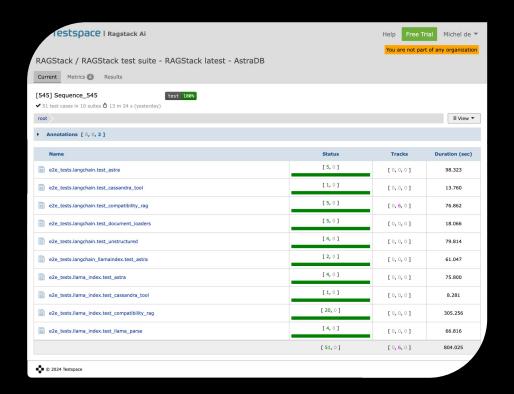

RAG on your data in the public cloud as well as private cloud

### Vectorize the Easy Path

# Demo: Vectorize the Easy Path

## RAGStack is ready for the enterprise

#### **Curated stack for GenAl**

Opinionated stack with LangChain, Langflow, LLamaIndex, Unstructured.io and more.

#### **Dependency management**

Brittle dependencies are something of the past with guaranteed to work package mgmt.

#### **Vulnerability tested**

Automated tests make sure no vulnerabilities creep in through 100s of dependencies

#### **Enterprise ready**

With 24x7x365 support offered through a well trusted partner. Also includes Long Term Support (LTS).

# GG

"Every company building with generative AI right now is looking for answers about the most effective way to implement RAG within their applications," said Harrison Chase, CEO, LangChain.

"DataStax has recognized a pain point in the market and is working to remedy that problem with the release of RAGStack. Using top-choice technologies, like LangChain and Astra DB among others, Datastax is providing developers with a tested, reliable solution made to simplify working with LLMs."

See the joint webinar

Harrison Chase CEO, LangChain

# Coding demo with RAGStack

## Langflow

- A UI for LangChain
- Low-code approach to build AI and LLM-powered applications.
- Makes it 100x faster for developers to prototype, iterate and ship Al applications to production.

# No-Coding demo with Langflow

# Takeaway no. 2

# It's not about AI tools and services

Tomorrow a better AI will emerge. But your data and content will always be your crown jewels. Make sure you stay in control and leverage a database with Vector support. Leverage enterprise hardened solutions like RAGStack and use rapid prototyping tools.
